

Instructions for registering Tas Engineering software:

There are only a few steps to get set up.

- Download and install Tas Engineering from the EDSL website on the machine you want to be licensed (<http://www.edsl.net/tas-engineering-downloads/>)
- Once installed, right-click the desktop icon of Tas Manager, and choose to “Run as Administrator”
- Once, Tas Manager is open with admin rights, click the “Register” button and send an image of the registration dialogue including the Tas Engineering ID to me by email or to support@edsltas.com

The ID is used to generate a valid license key. The Tas Manager application can be closed while waiting for the key. The license will be locked to a particular machine.

Information for Students:

Students should use their student emails and include the following info in their email along with the Tas Engineering ID:

- Name of academic institution
- Name of supervisor/lecturer
- Course title/project title
- End date of current semester / project deadline

To expedite the reply of emails please send inquiries to support@edsltas.com (US and Canadian support).
