

Instructions for registering Tas Engineering software:

Download and install Tas Engineering:

- Download and install Tas Engineering from the EDSL USA website on the machine you want to be licensed (<https://www.edsltas.com/>)

Purchase software license and activate the machine:

- Purchase Tas Engineering from the [edsltas.com](https://www.edsltas.com) website. Once the purchase has been confirmed you will be sent an email with the key file attached along with instructions and links to the training material.
- Once Tas is installed, open Tas Manager and click the “Register” button. Here you will be able to open your license key file to activate your machine. (If the option is not shown in the registration dialogue -> click ‘Settings’ -> ‘Options’ and set the Licensing option to ‘License Server’).
- If you need any assistance please send an email to support@edsltas.com with the below information.
 - Name of company
 - Name and email of user
 - If you received the purchase confirmation email, also include your “License ID” (file name of the Key File received)

Important notes regarding Tas Engineering v9.4.4 licensing:

- Licenses are node locked: Once the key file is activated on a machine the license is locked to that machine. To license a 2nd machine a second license would be required.
- An active internet connection is required to authenticate the license.
- You can simultaneously use annual and monthly subscriptions: For example, if you have one annual license and temporarily need access to Tas Engineering on another machine you are able to purchase one month on the monthly license with no long-term commitment.
